Article by the Central Office of Measures in an international scientific journal

Published by: Adam Żeberkiewicz

In April 2024, a scientific article authored by employees of the Central Office of Measures was published in the international journal "Measurement Science Review" (impact factor = 1.985).

The article presents research on the metrological characteristics of a force torque transducer with a measuring range up to 2000 N m, taking into account studies on its creep behavior.

The article was produced as a result of the implementation of the European project [19ENG08 WindEFCY](#), whose overall goal is to support Europe's transition to renewable energy sources in the form of wind turbines.

The project [19ENG08 WindEFCY](#) is funded under the European Metrology Programme for Innovation and Research (EMPIR).

Janusz D. Fidelus, Anna Trych-Wildner, Jacek Puchalski, Paula Weidinger „Study of a 2 kN·m Torque Transducer Tested at GUM and PTB, Including Creep Behaviour”, Measurement Science Review 24(2):88-94, DOI:[10.2478/msr-2024-0012](https://doi.org/10.2478/msr-2024-0012)

The content of the article is available [on the journal's website](#).
